GETINGE 6000
THE FULLY AUTOMATIC FLUSHER-DISINFECTOR
MAKING A DIFFERENCE IN INFECTION CONTROL

The Getinge 6000, a fully automatic flusher-disinfector for hospitals and healthcare facilities, offers innovative, user-friendly features that improve efficiency and infection control.

The Getinge 6000 empties, cleans and thermally disinfects receptacles such as bedpans and urine and suction bottles to ensure a continuous flow of clean goods from the sluice room. And working routines become easier and more efficient. The sliding door opens without you having to touch the machine.

**Unique photocell control**
A unique photocell opens and closes the sliding door automatically – simply place your hand in front of the photocell. This improves infection control, as you can unload clean goods without touching a potentially contaminated door handle.

**Fast cooling – and drying**
The Getinge 6000 dries and cools goods faster. After the disinfection phase, cooling water is taken directly from the water inlet, not from an internal tank. Cooling water from a separate spray nozzle is sprayed on the chamber wall to condense the steam. And after the cycle, the door automatically opens about 10 cm to speed up the drying and cooling of the inverted goods.

These innovative features make a difference in infection control. And the new exterior design makes the Getinge 6000 an efficient, ergonomic and attractive product to work with in the heart of a well-planned, smooth-running sluice room.

**In full view**
The Getinge 6000 also allows you to observe the process during the cycle, thanks to the new VIP (View-in-Process) glass window.

The VIP window lets you follow the process visually at any time. No need to touch! Just place your hand near the photocell to open or close the door. The vertically sliding door saves space. After the cycle the door opens slightly to speed up drying.
**Three standard programs on buttons**
Economy, normal and intensive – offer solutions for different receptacles.

**SAFE DISINFECTION**
Steam is sprayed in through all nozzles. This guarantees the disinfection of all surfaces of the items, and of the machine’s chamber, pipes and nozzles.

**ENVIRONMENT-FRIENDLY**
Satisfies strict environmental requirements: low water consumption, good heat insulation, low noise level and recyclable material.

**Conformity to standards**
EN-ISO 15883
PHOTOCELL
For hands-free door control and improved infection control.

ROTATING HOLDER
After the door is locked, the holder rotates 150 degrees and empties the receptacles.

DRY, COOL RECEPTACLES AFTER THE CYCLE
When the cycle is completed, the door opens approximately 10 cm to facilitate rapid self-drying and cooling of the goods.

SAFE STORAGE
For detergents and rinse agent.

Getinge's range of detergents has been developed, tested and validated on Getinge's flusher-disinfectors for human waste containers to meet EN ISO 15883 standards for cleaning efficiency of goods commonly found in sluice rooms and to protect users and patients.
ROTATING HOLDER

The Getinge 6000 is fitted with a rotating holder. This unique feature makes loading routines more efficient, ensures good cleaning results and improves the working environment.

Once the door is locked, the holder rotates 150 degrees and empties the receptacles. This enhances working conditions for staff, as there is no longer a risk of spillage, splashing or aerosols from the receptacles during the loading procedure.

Goods can be loaded easily. The jet nozzles are integrated in the rotating holder and positioned to deliver the best cleaning results and optimize the disinfection process.

FLEXIBLE SOLUTIONS

Getinge 6000 can handle a broader range of receptacles than any other flusher-disinfector. We offer a wide selection of standard holders for commonly used human-waste receptacles, as well as special holders and adaptors for suction bottles and solutions for processing bowls, basins and other utensils used in healthcare facilities.

COMPLETE SOLUTIONS FOR INFECTION CONTROL
Getinge is the world’s leading provider of solutions for effective cleaning, disinfection and sterilization in the healthcare and life science sectors. We are dedicated to helping our customers provide better care at a lower cost. We do this by offering well-thought-through and customized solutions. This means that we are with our customers all the way from architectural planning and education to traceability and support – with complete solutions, long-term commitment and global presence. Getinge – Always with you.

GETINGE GROUP is a leading global provider of products and systems that contribute to quality enhancement and cost efficiency within healthcare and life sciences. We operate under the three brands of ArjoHuntleigh, GETINGE and MAQUET. ArjoHuntleigh focuses on patient mobility and wound management solutions. GETINGE provides solutions for infection control within healthcare and contamination prevention within life sciences. MAQUET specializes in solutions, therapies and products for surgical interventions, interventional cardiology and intensive care.
